

Monkey and Ape

A monkey is a primate. Monkeys have long, thin tails. They spend most of their lives in trees. They eat fruit, plants, and insects. The size of a monkey's brain is small. Monkeys make many sounds to communicate with one another. They can be different colors. The monkey below has dark brown ears with a light brown face.

An ape is a primate, too. Apes do not have tails. They tend to spend their time in trees and on the ground. Like monkeys, apes eat fruit, plants, and insects. Apes have large brains and are large in size. They are also mammals. The ape below has a black face with a pink nose!

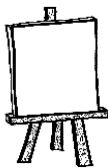

Read the passage three times. Color a star each time you read.

Compare. Underline the similarities in blue.

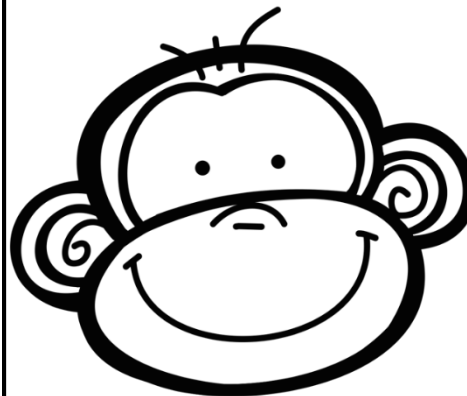

Contrast. Underline the differences in red.

Illustrate and color the pictures using the information you read in the text.
